- Describe the Project and deliverables; provide a map if applicable
- Submit a deliverable worksheet listing tasks and deliverables with start dates and end dates for the significant benchmarks.
- List permitting requirements necessary to initiate and complete project and how the requirements will be met.

This project is being proposed due to complaints from residents on Fenway Drive who experience basement flooding during average storm events due to an overwhelmed, potentially undersized storm water system and the lower elevation of Fenway Drive in relation to Banner Lane to the north.

The geometrics of the roadway contribute to the issue as the existing system on Banner Lane, which is higher elevation wise than Fenway, ties into the system on Fenway which ties into an existing junction chamber on Arcadia which outlets into the Arcadia culvert with the invert of the culvert from the junction chamber and the invert of the Arcadia culvert are the same.

At least annually, but more if needed, drainage structures will be inspected with the Sewer Department's Sewer Supervisor being responsible to keep charts and/or maps of these inspections and condition reports. In addition, Service Department workers can supplement these reports with any drainage work item needing attention, cleaning or repairs while they are out performing their regular duties, and notice items of concern which they can pass on to the Supervisor for future work scheduling assignments. The inspection and maintenance duties will be compiled into the annual report which is sent to the Ohio EPA to meet the MS4 requirements.
